ASEAN Sustainable Consumption Loop

Limiting waste and sustaining capabilities in ASEAN communities through real-time information cloud

Team Amplify - Philippines

University of the Philippines Visayas
Francis Nacionales
Erru Torculas

The increasing urbanization has merited waste management dilemmas, hence interfering with sustainable production and consumption

ASEAN Countries Total Population from 2011 to 2021

**Population in ASEAN
countries have seen
a steady increase
throughout the years**

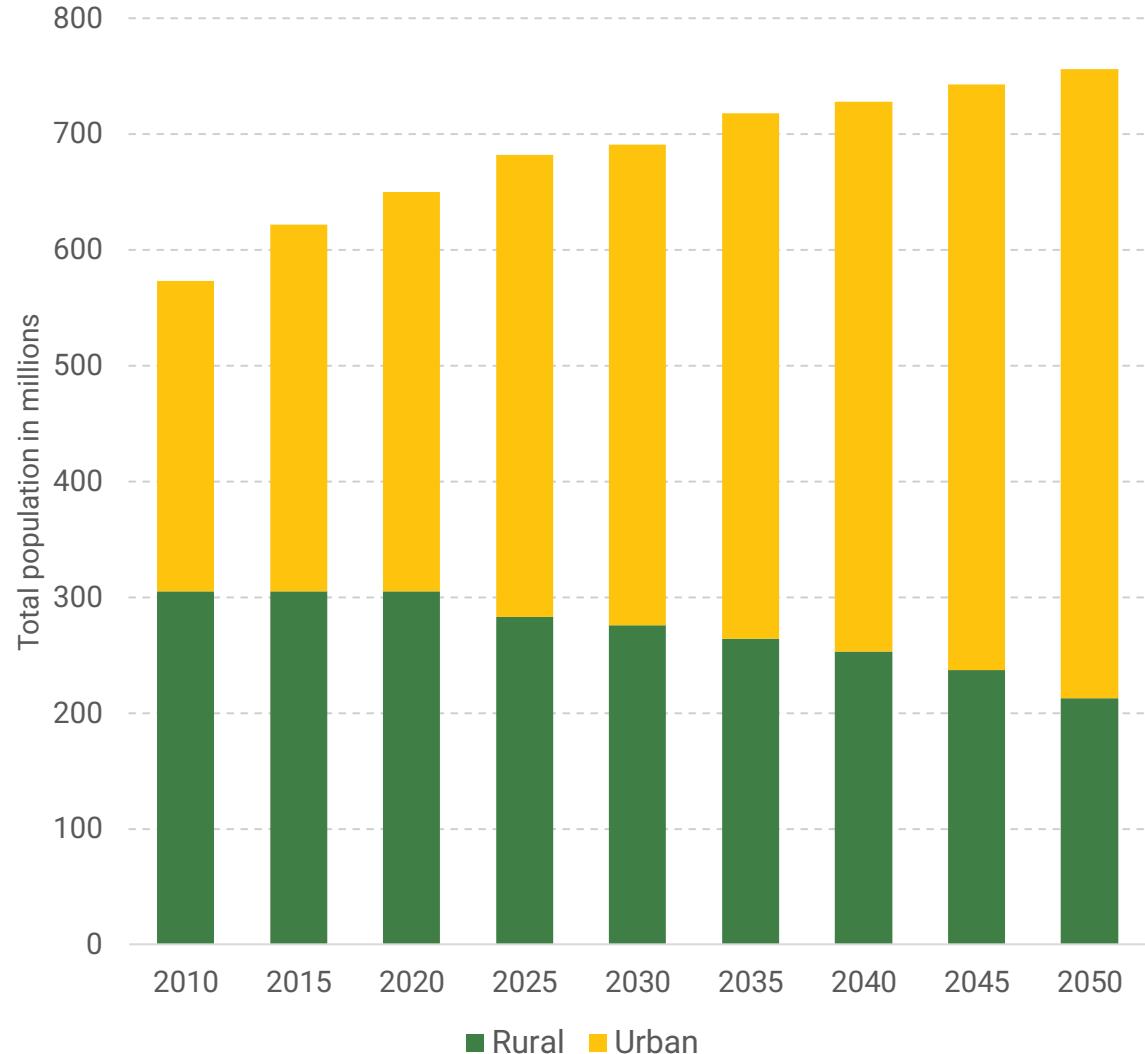

*projected population

Source: Aaron O'Neill (2021). Statista 2021

<https://www.statista.com/statistics/796222/total-population-of-the-asean-countries/>

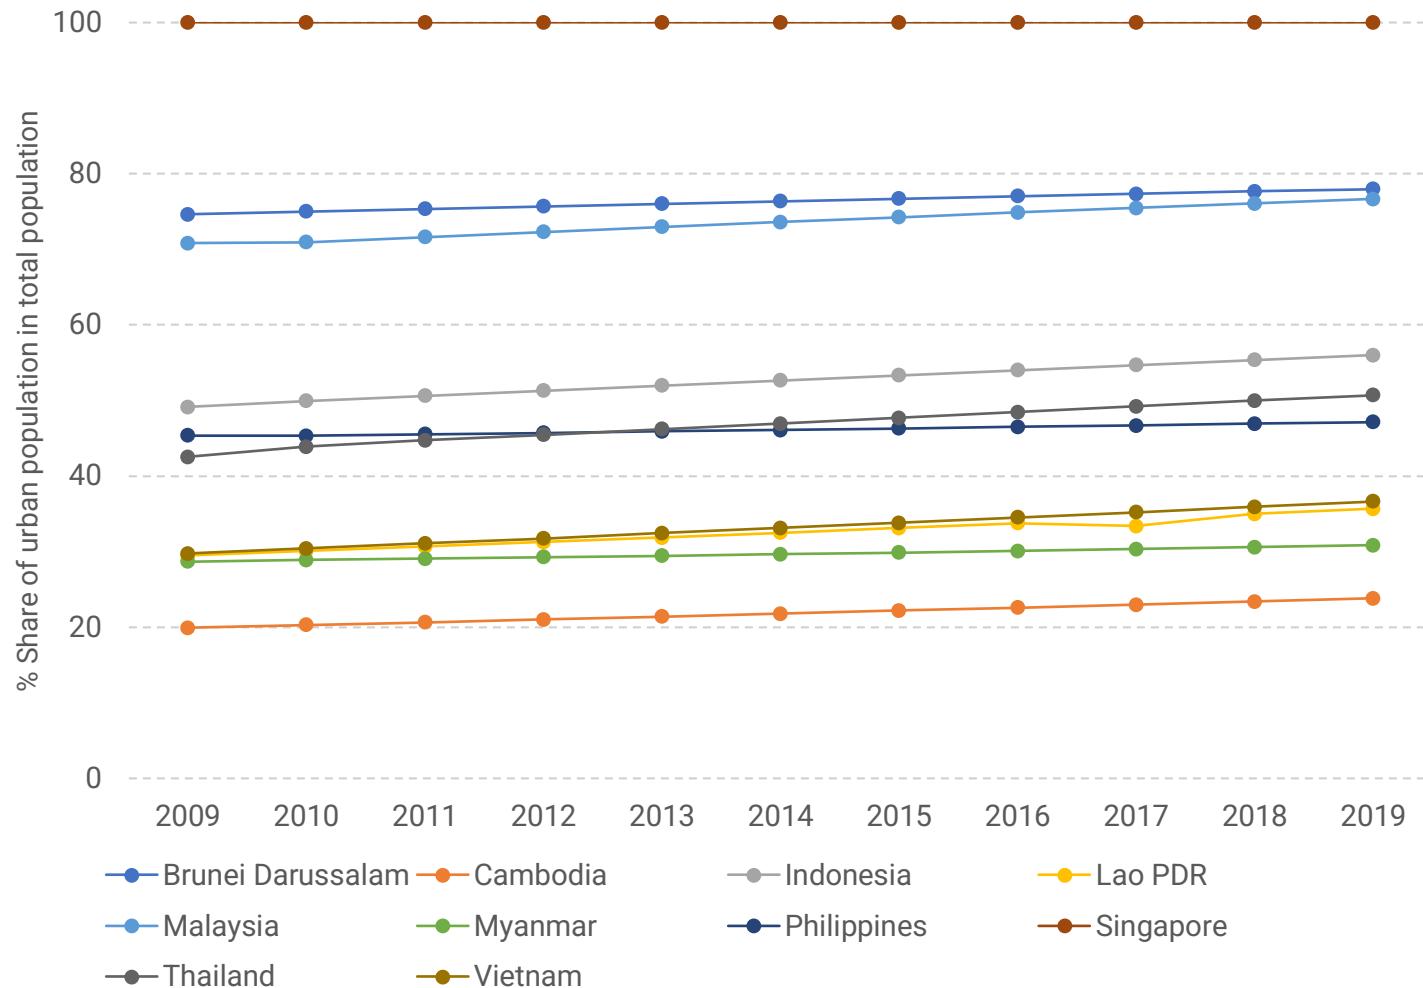

Migration from rural areas to cities is a byproduct of rapid urbanization.

ASEAN Projected Population Projection in Urban and Rural Areas in year 2050

Source: Fouth ASEAN State of the Environment Report 2009, United Nations Environment Programme Summary Report 2017
<https://environment.asean.org/wp-content/uploads/2020/03/Summary-Report-Waste-Management-in-ASEAN-Countries-UNEP.pdf>

ASEAN Urbanization from 2009 to 2019

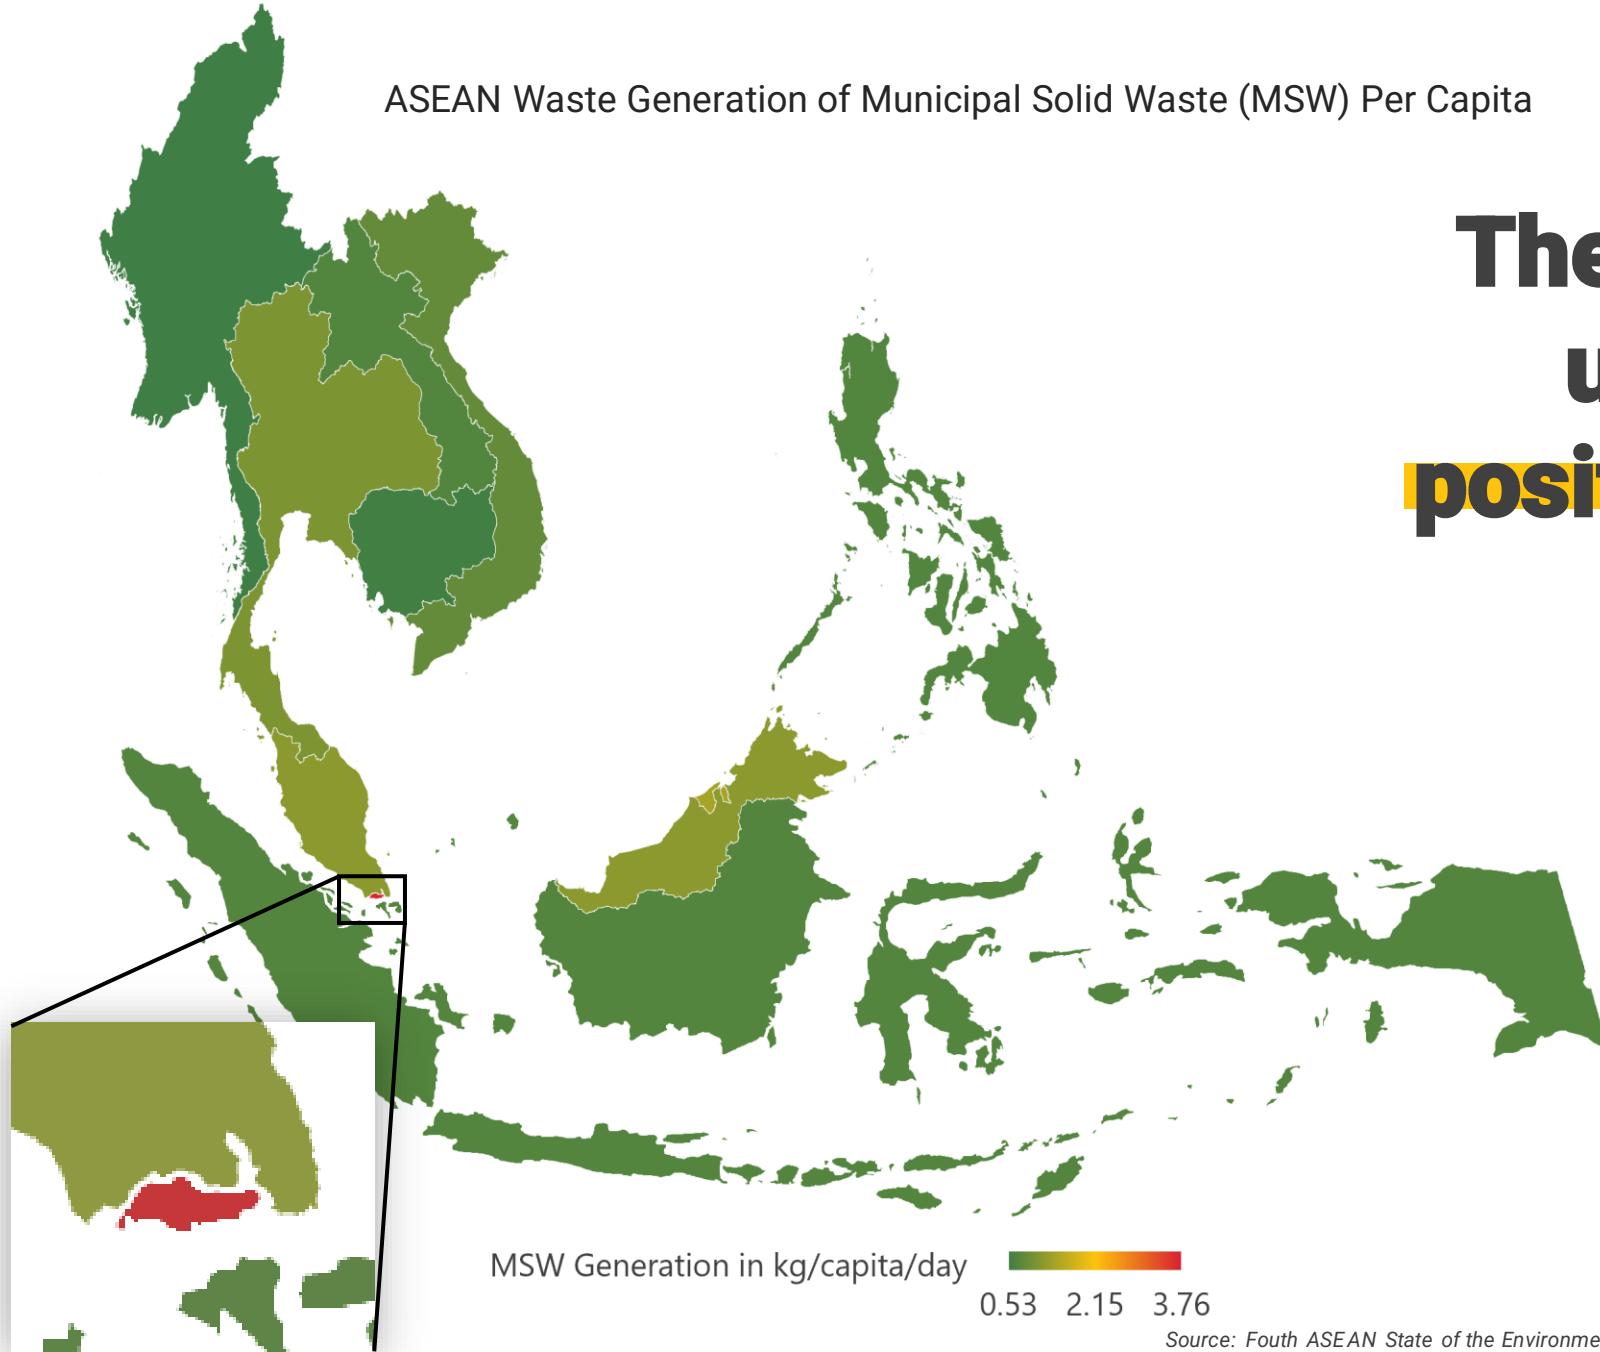

The ASEAN has shown increasing shifts to urbanization over time.

Source: The World Bank. United Nations Population Division. World Urbanization Prospects: 2018 Revision <https://data.worldbank.org/indicator/SP.URB.TOTL.IN.ZS?locations=4E>

ASEAN Waste Generation of Municipal Solid Waste (MSW) Per Capita

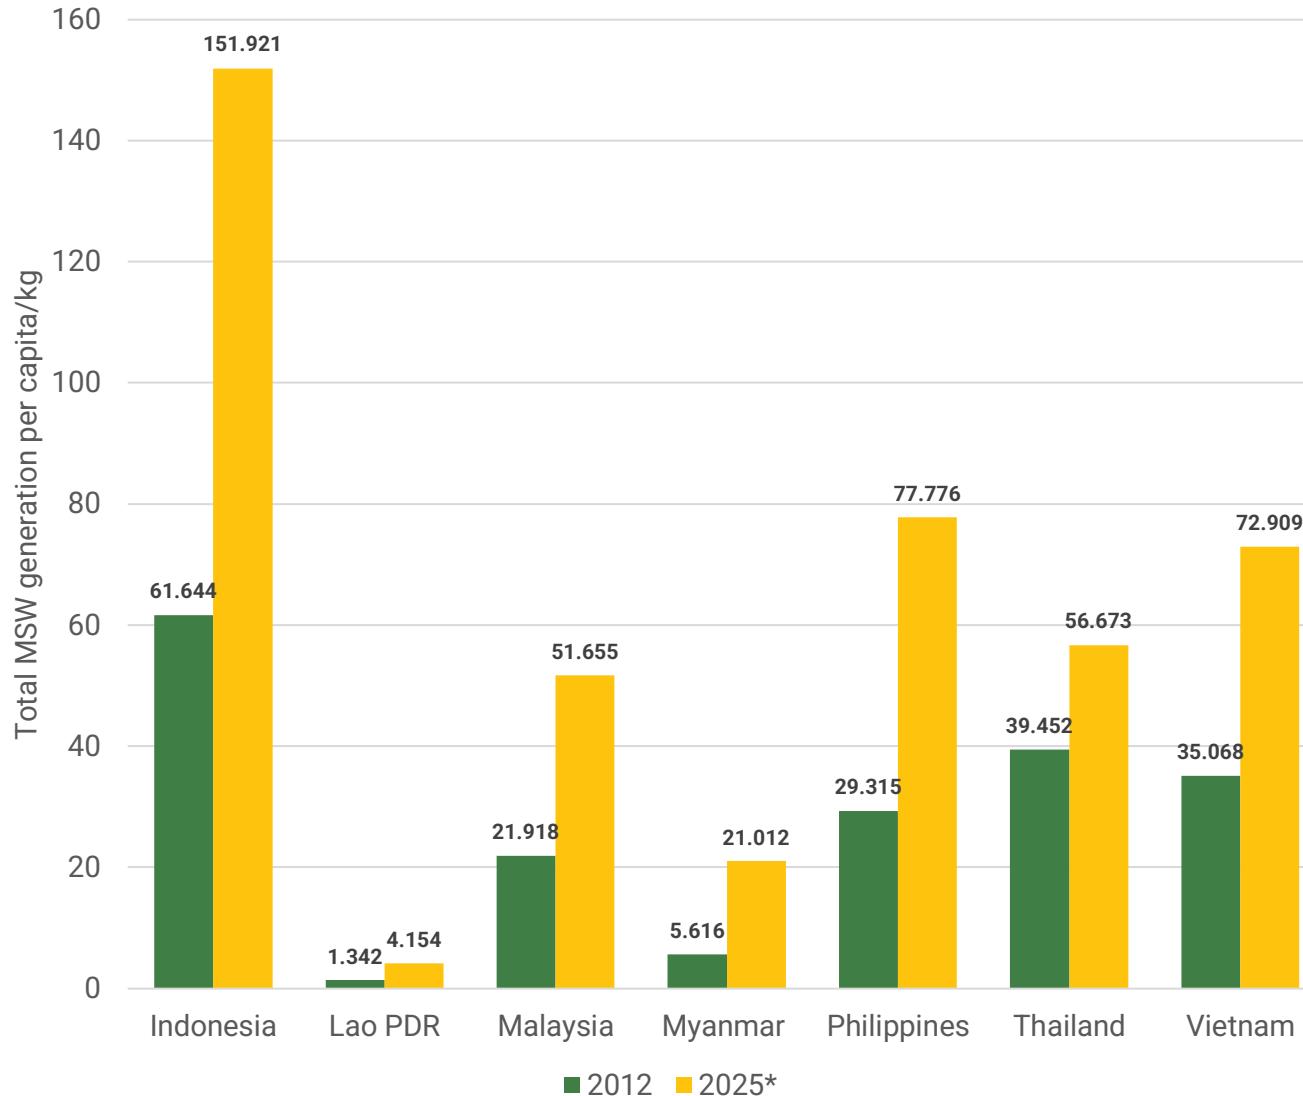

The rapid growth in urban population positively correlates with waste generation.

Source: Fourth ASEAN State of the Environment Report 2009, United Nations Environment Programme Summary Report 2017
<https://environment.asean.org/wp-content/uploads/2020/03/Summary-Report-Waste-Management-in-ASEAN-Countries-UNEP.pdf>

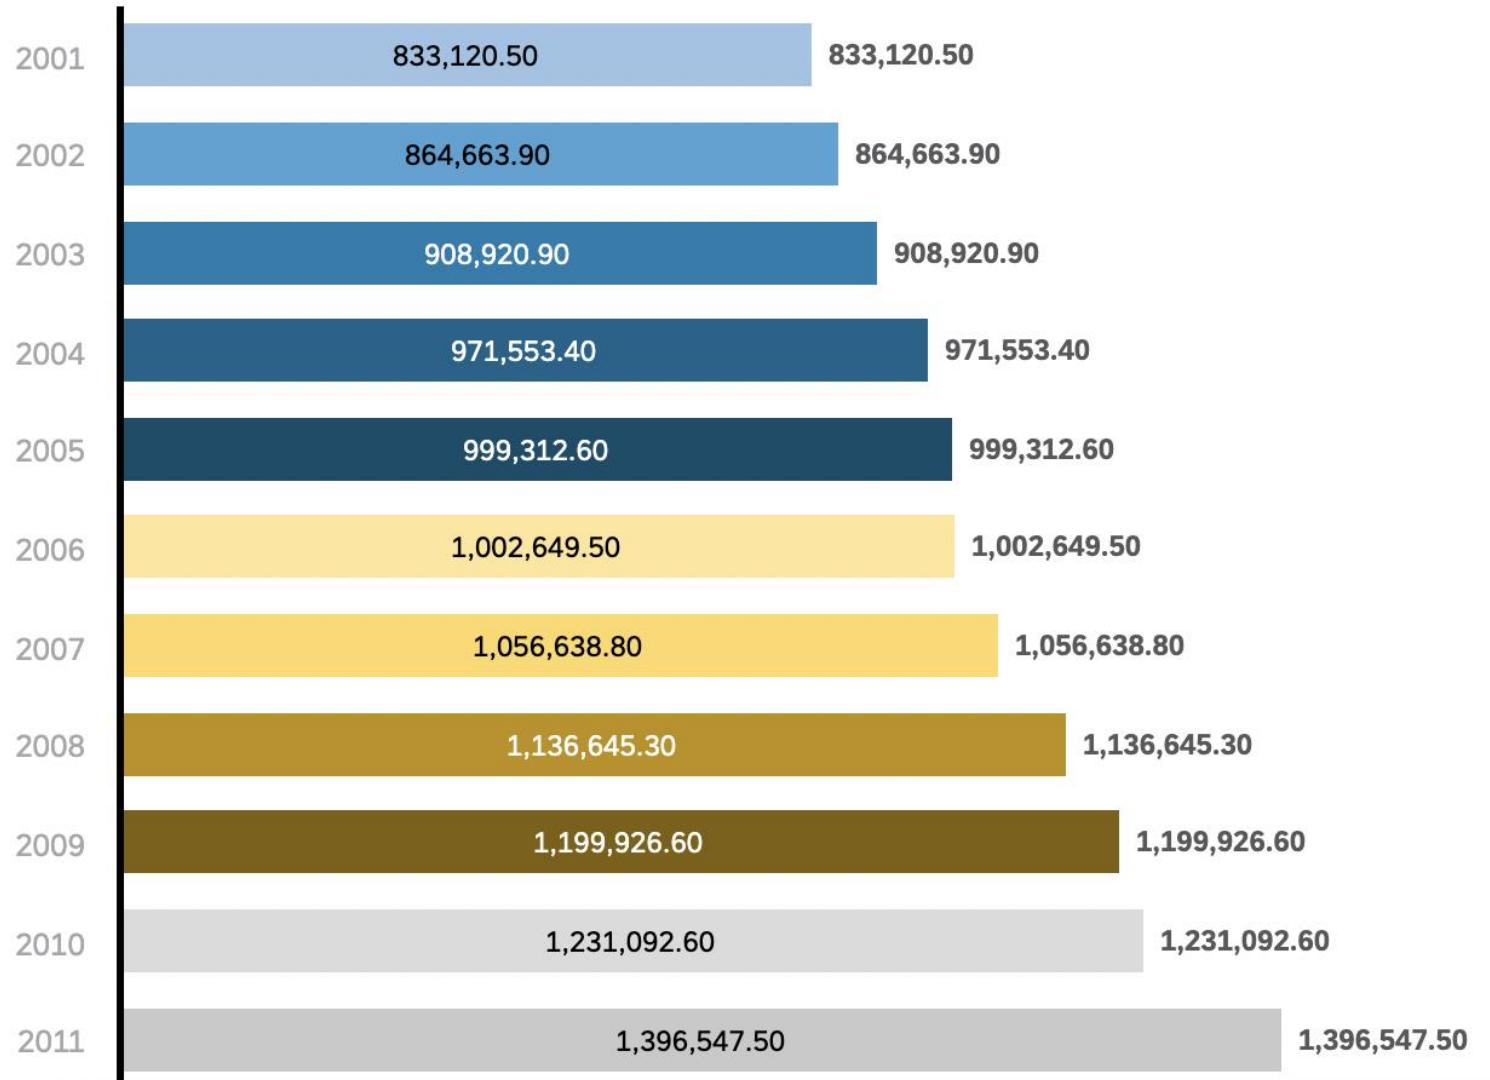

Projected Total Municipal Solid Waste Generation of some ASEAN countries from 2012 to 225

The total municipal solid waste generation is projected to double by 2025

CO2 Emissions of ASEAN Countries from 2001 to 2011

Increase in waste generation is parallel to the increase in CO₂ emissions.

**Higher demand, higher production,
higher volume of waste generated**

In the Philippines,
waste management
is made **more**
complicated by the
acceleration in
urbanization.

74%

Waste produced by households

35,580 tons

Everyday generation of garbage

Only 40-85%

Waste Generated is collected nationwide

What will happen to AIDA now?

12 RESPONSIBLE
CONSUMPTION
AND PRODUCTION

11 SUSTAINABLE CITIES
AND COMMUNITIES

13 CLIMATE ACTION

An information-driven communication system to monitor production, consumption, waste management, and trade priorities through cloud computing.

UPTrack framework

Real-time information means real-time informed decisions

UPTrack Cloud

A laptop displaying the UPTrack platform. The interface includes a header with the UPTrack logo and user icons. Below the header is a search bar with placeholder text "Search anything, we'll help you". The main content area shows a photograph of a person working in a large pile of trash. On the left side of the screen, there are vertical navigation icons. The overall theme is environmental waste management.

Input

- ✓ Production Rates
- ✓ Supply Density
- ✓ Consuming Power
- ✓ Waste Monitoring
- ✓ Existing Policies

Feedback

- ✓ Stock Surplus
- ✓ Stock Deficiency
- ✓ Consumption Rates
- ✓ Waste Generation
- ✓ Waste Treatment
- ✓ Recycling/Recovery
- ✓ Updated Policies

A laptop displaying the UPTrack platform's dashboard. The interface includes a header with the UPTrack logo and user icons. A search bar shows the query "Updated Policies". Below the search bar are sections titled "Updated Policies" and "Recommended". The "Updated Policies" section contains four cards with images and titles: "Digital Masterplan 2030", "ASEAN Sustainable Loop", "Economic Masterplan", and "Waste Management 101". The "Recommended" section contains three cards with data visualizations: "Composition of Municipal Solid Waste (MSW)" (a donut chart showing 67% Organic, 46% Paper, 15% Plastic), "Waste Generation" (a line graph comparing Philippines, Lao PDR, Singapore, and Malaysia over time), and "Recycling" (a donut chart showing 47% Reused). The overall theme is waste management and policy analysis.

UPTrack feasible focal points

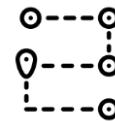

Recycling Facilities

Making the existence of recycling facilities parallel with our waste production is crucial. This will balance the waste inputs with repurposed outputs.

Transportation

Vital in importing needs and exporting surplus; makes trade prioritization possible across ASEAN nations.

Waste Tracking

Effective waste tracking will identify possible water and land polluters and hold them accountable of their actions

Education

The importance and benefits of sustainable living, the climate crisis, and current analytics should be made available to the general public.

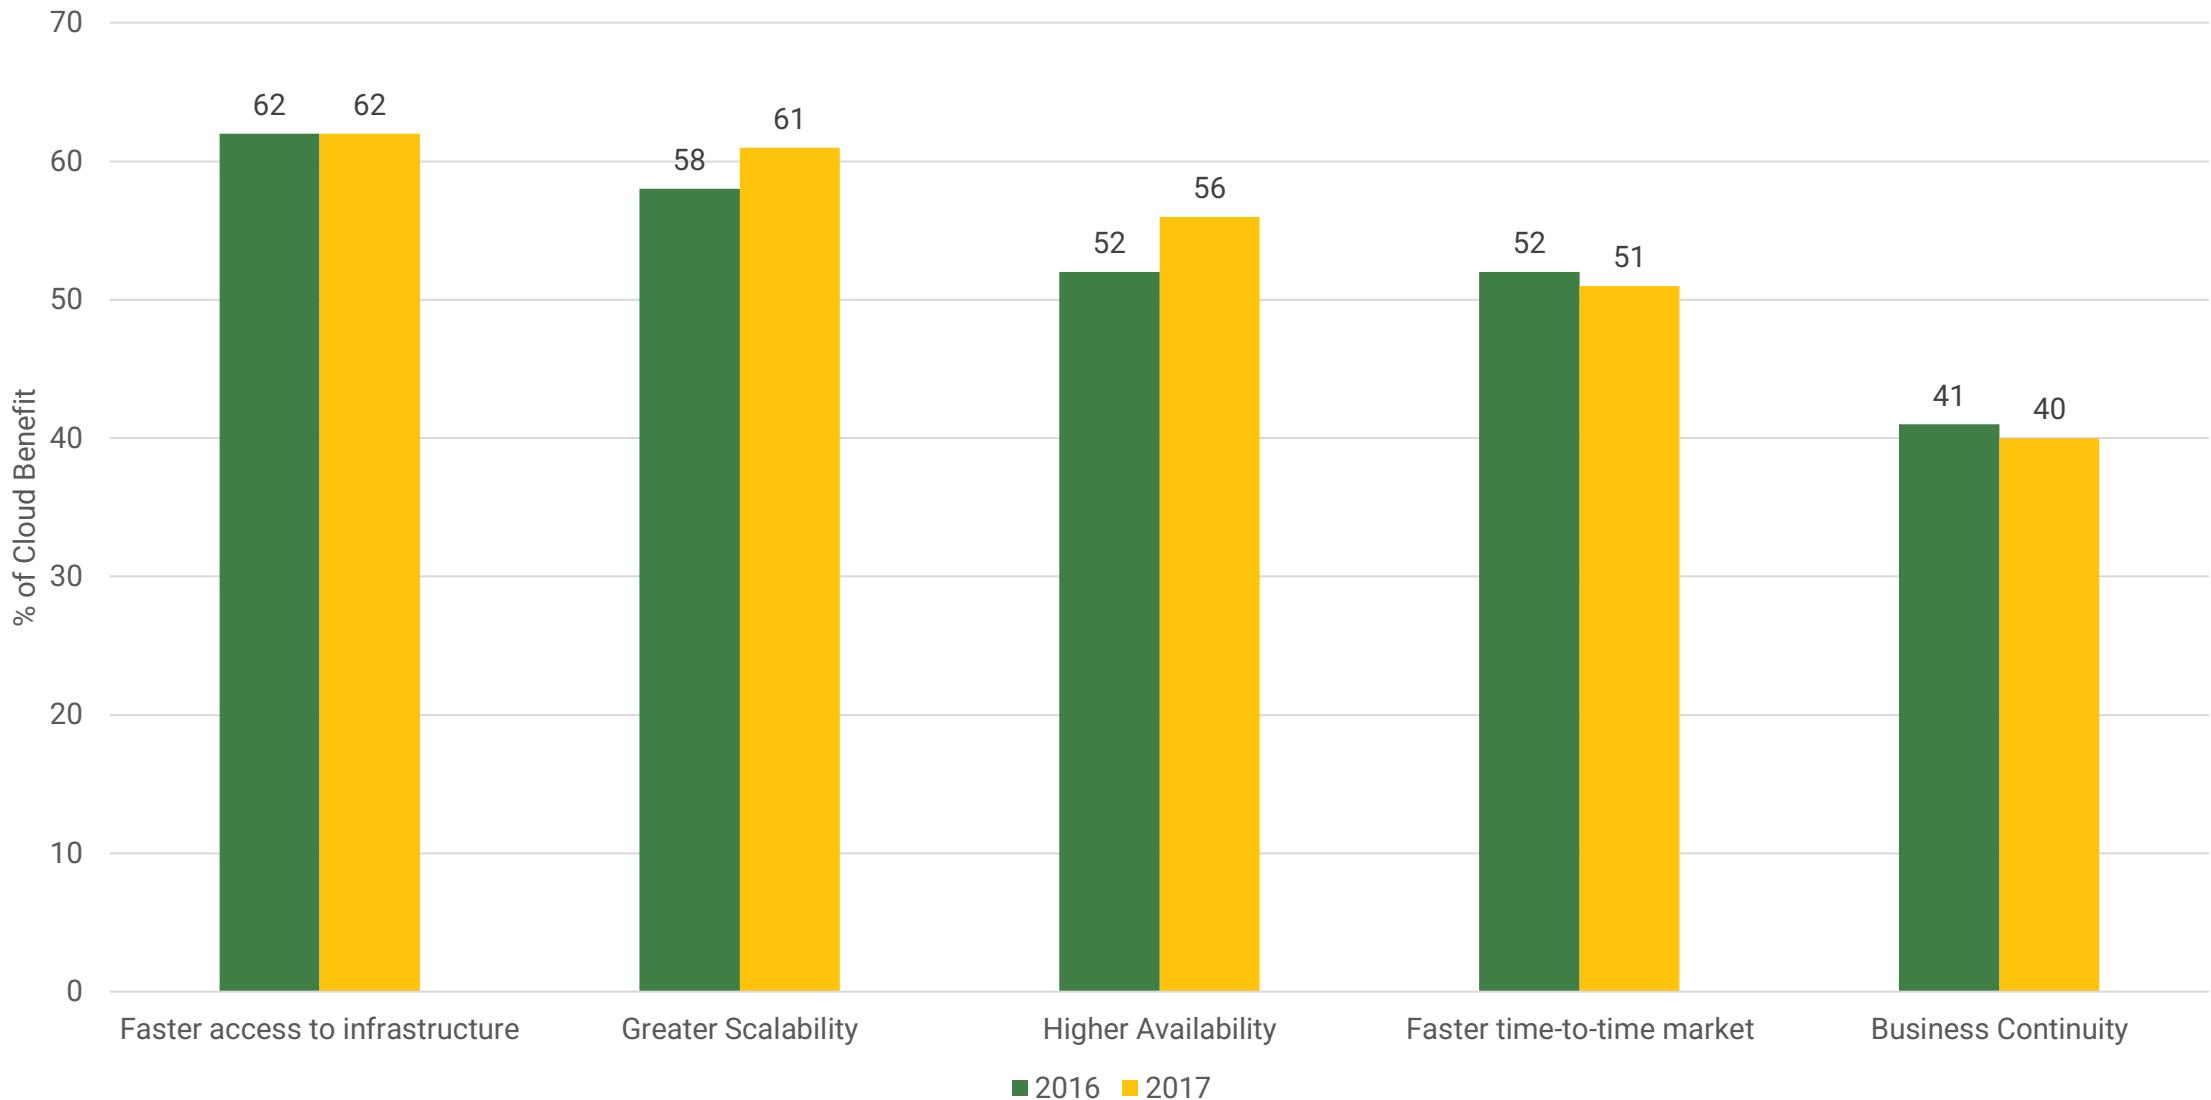

Product Development

Developing sustainable packaging and product prolonging technologies will lessen waste materials

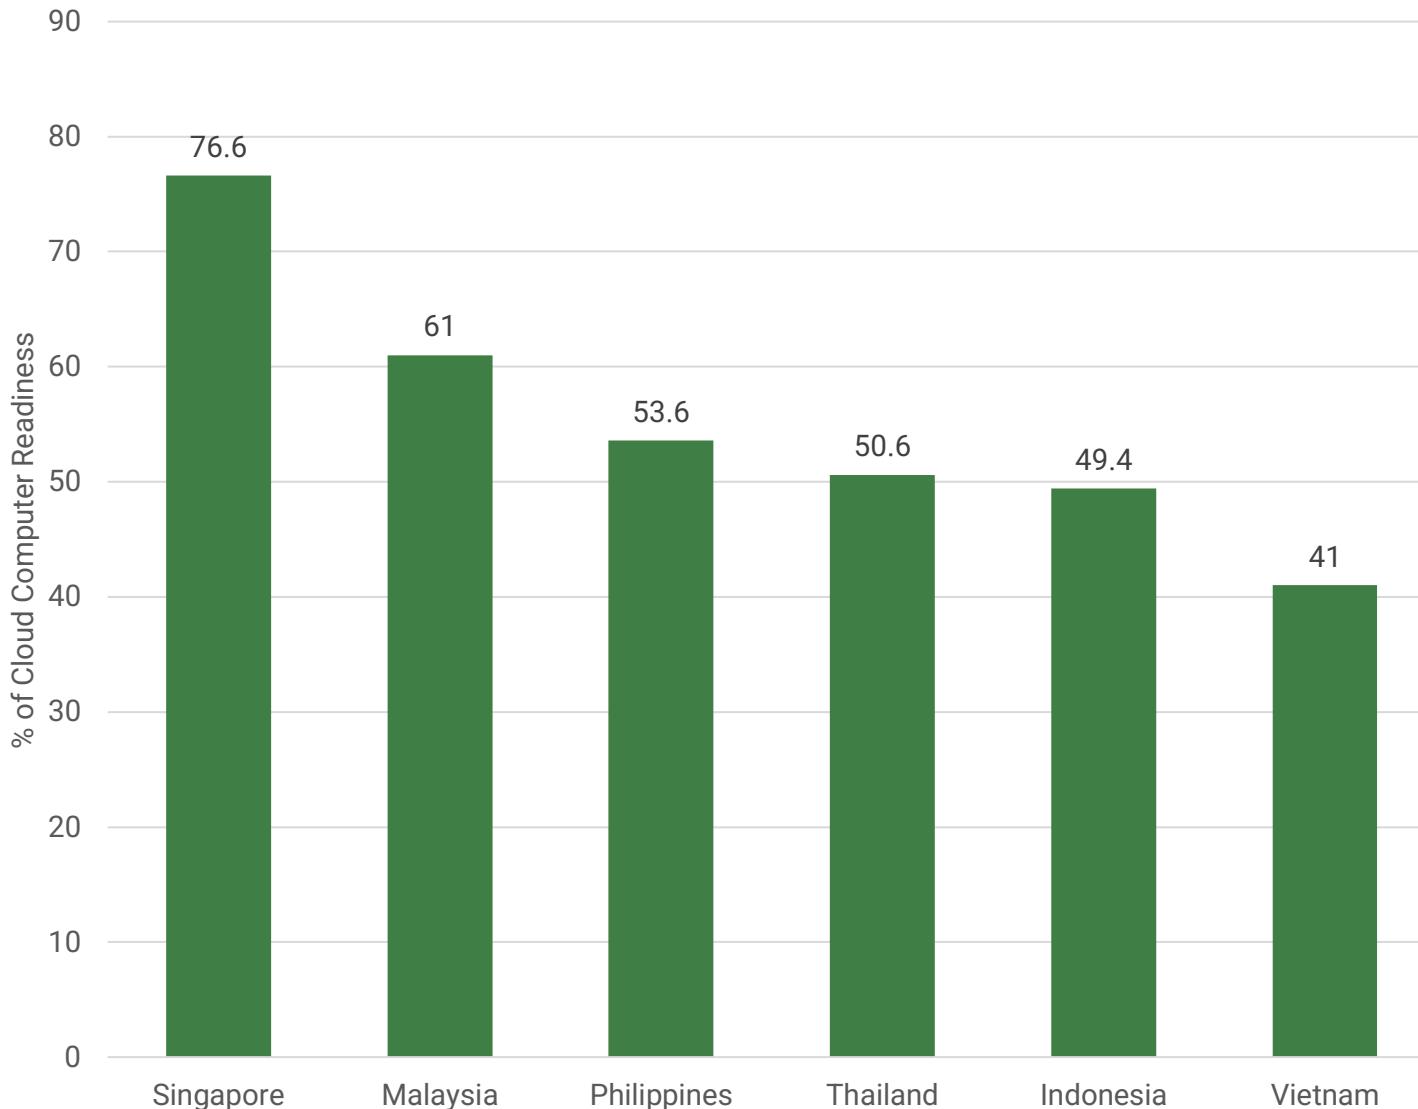

The ASEAN Digital Masterplan 2025 envisions a substantial portion of the population being on broadband devices; leaning towards the use of cloud services.

Cloud Top Benefit of Cloud Computing in 2017

Cloud Computing Readiness Index of some ASEAN Countries in 2018

**It's time to adopt
cloud-based
solutions in ASEAN.**

Target **Indicator 11.6.1**

11.6

Proportion of urban solid waste regularly collected and with adequate final discharge out of total urban solid waste generated, by cities

Target **Indicator 12.3.1**

12.3

By 2030, halve per capita global food waste at the retail and consumer levels and reduce food losses along production and supply chains, including post-harvest losses; Global food loss index

Target **Indicator 12.5.1**

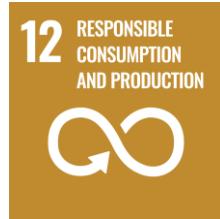

12.5

By 2030, substantially reduce waste generation through prevention, reduction, recycling and reuse; National recycling rate, tons of material recycled

Target **Indicator 12.7.1**

12.7

Promote public procurement practices that are sustainable, in accordance with national policies and priorities; Number of countries implementing sustainable public procurement policies and action plans

Target Indicator 12.8.1

12.8

Extent to which (i) global citizenship education and (ii) education for sustainable development (including climate change education) are mainstreamed in (a) national education policies; (b) curricula; (c) teacher education; and (d) student assessment

Target Indicator 13.2.1

13.2

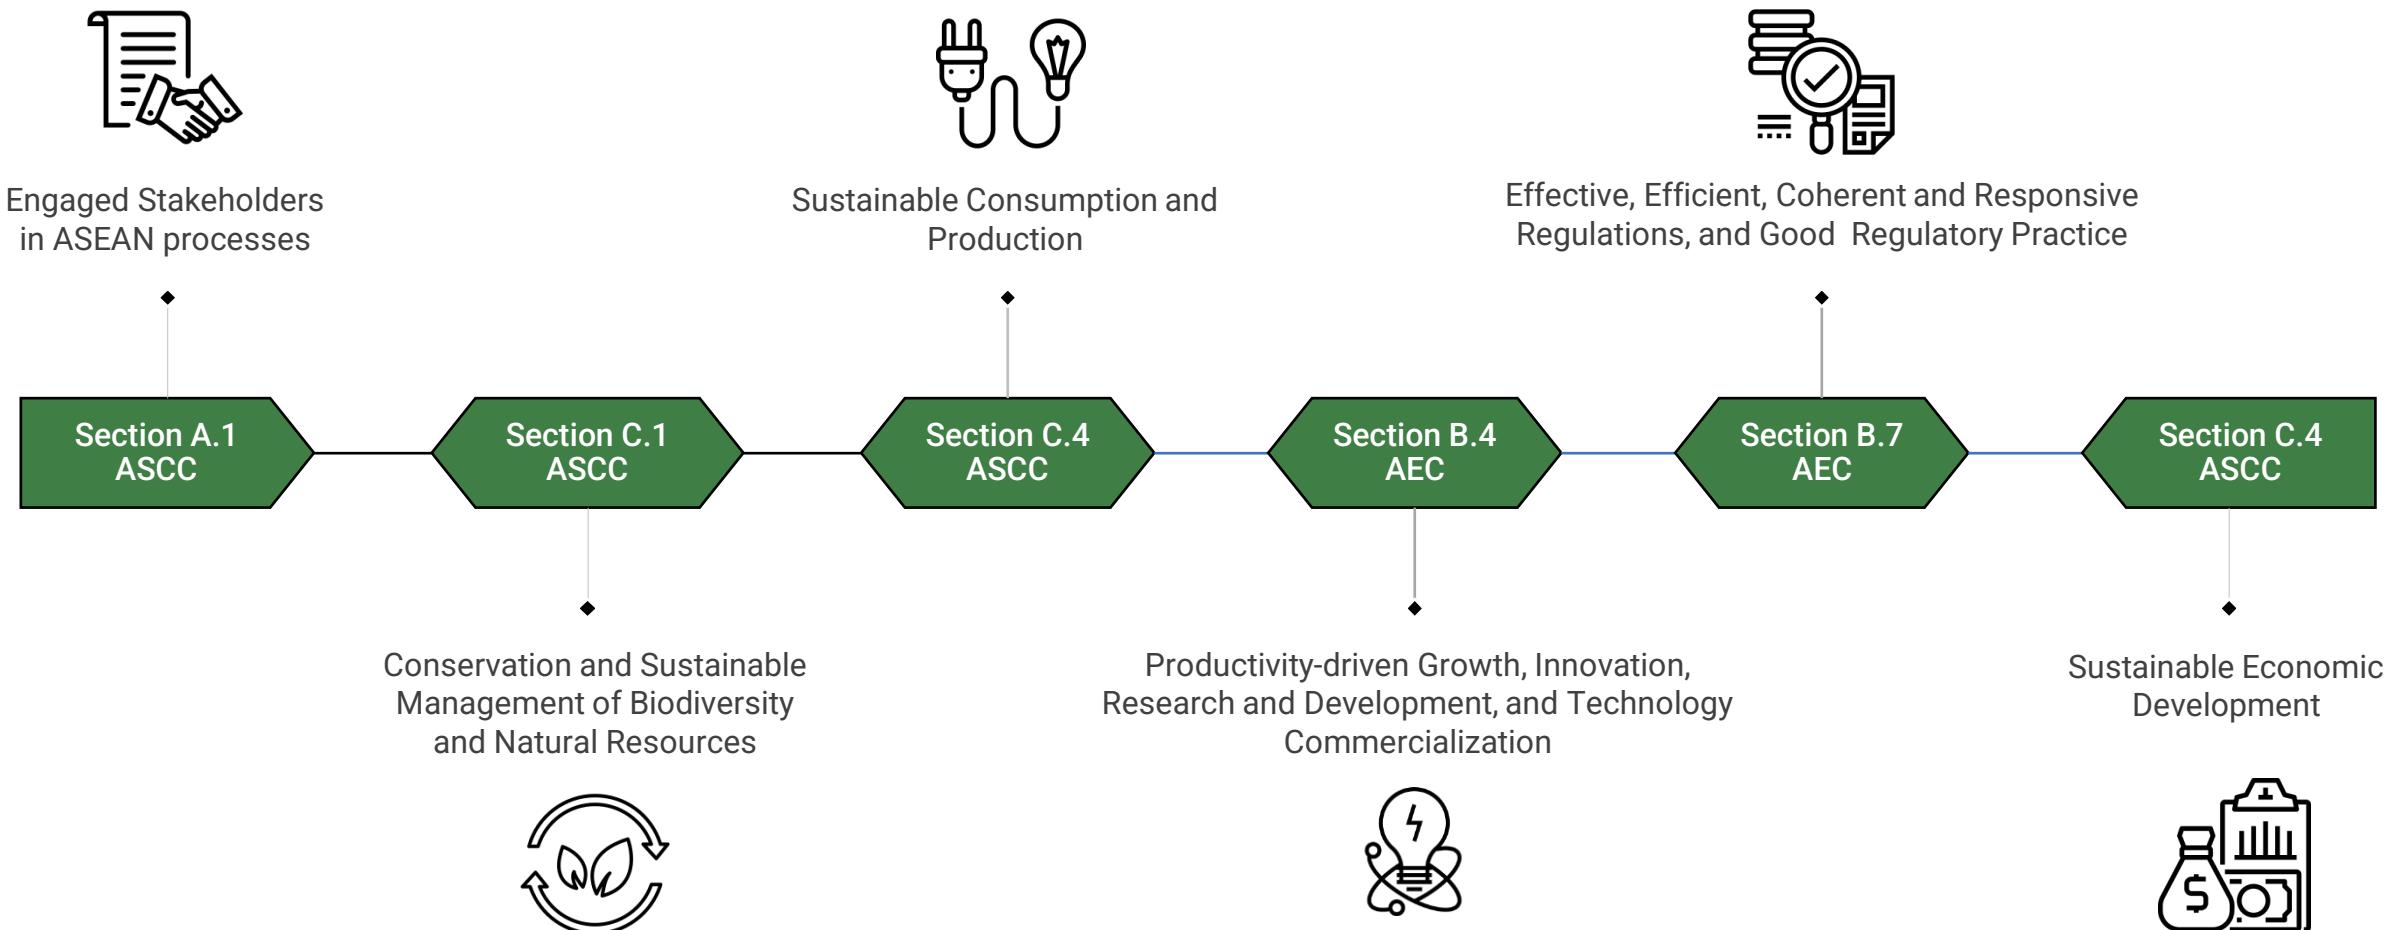

Number of countries that have communicated the establishment or operationalization of an integrated policy/strategy/plan which increases their ability to adapt to the adverse impacts of climate change, and foster climate resilience and low greenhouse gas emissions development in a manner that does not threaten food production (including a national adaptation plan, nationally determined contribution, national communication, biennial update report or other)

Target Indicator 13.3.2

13.3

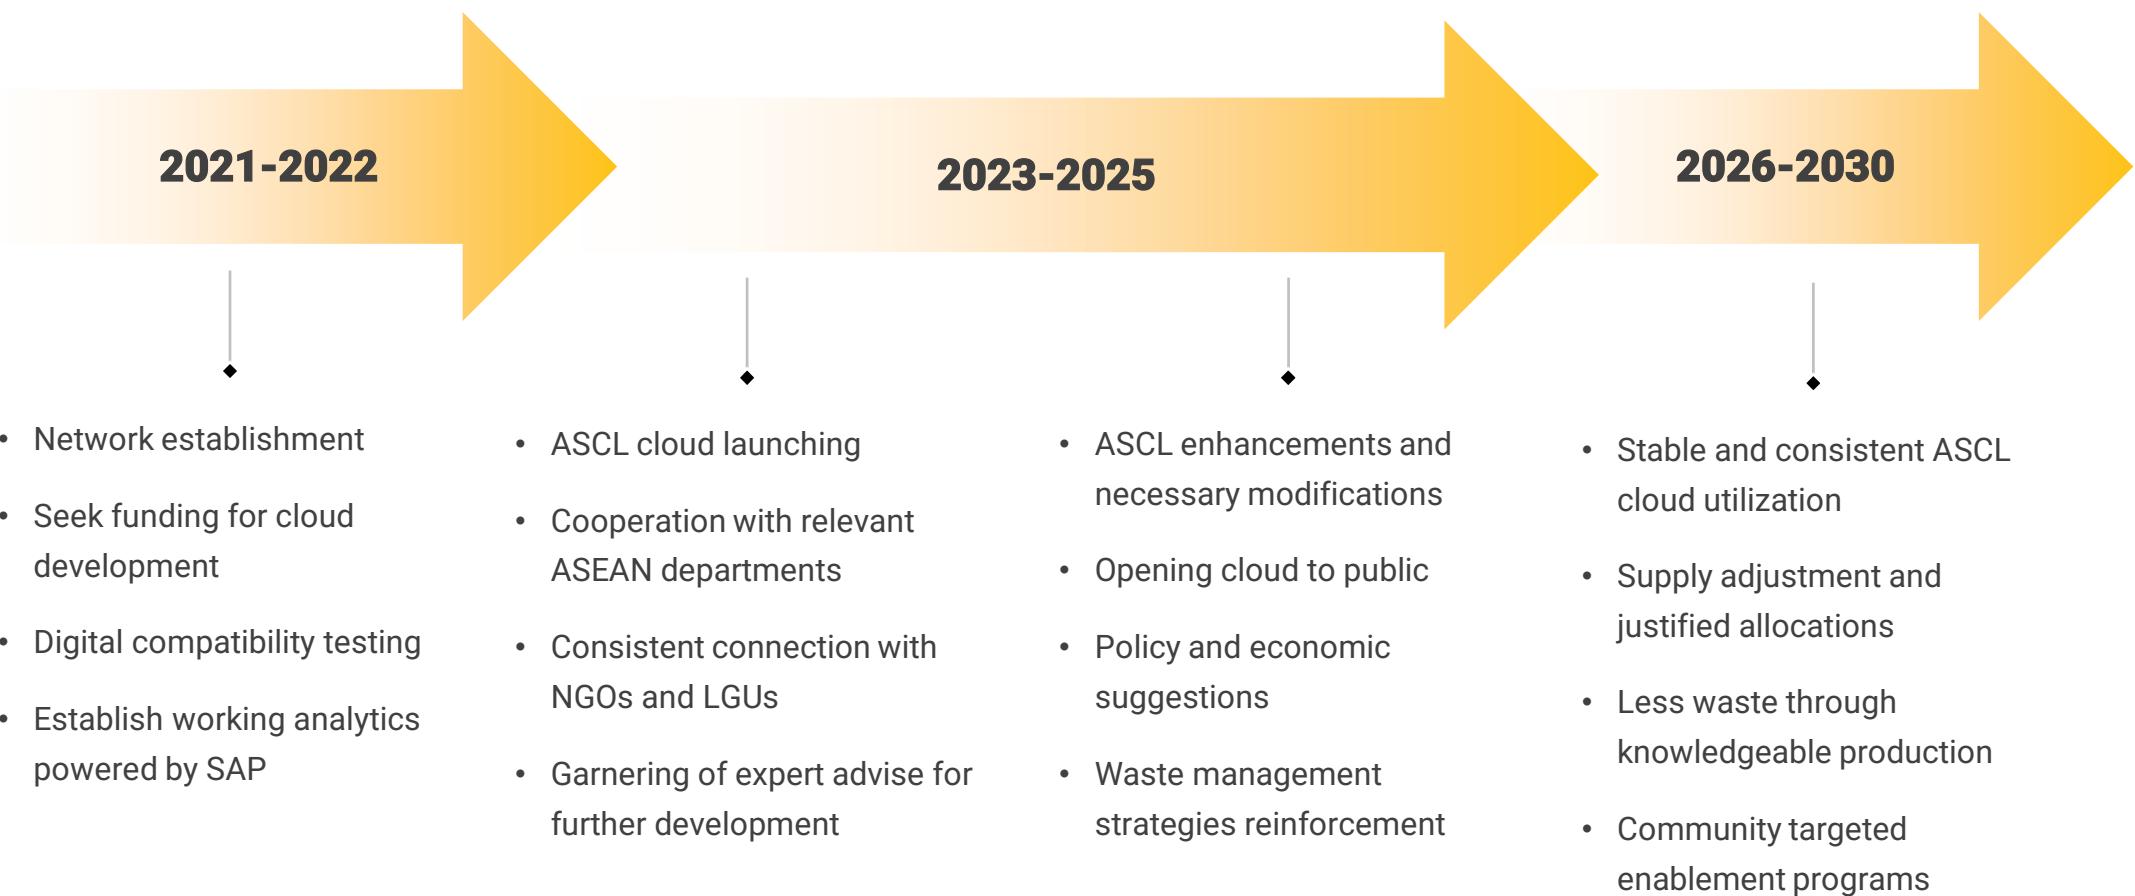

Number of countries that have communicated the strengthening of institutional, systemic and individual capacity-building to implement adaptation, mitigation and technology transfer, and development actions

By 2025, the following goals of ASEAN Socio-Cultural Community (ASCC) and ASEAN Economic Community (AEC) blueprints will be accomplished

Communication-centered technology roadmap

A comprehensive step-by-step plan to execute the ASEAN sustainable consumption loop by setting reasonable targets and planning proper execution

A photograph of a woman in a field, smiling at the camera. She is wearing a light green headscarf and a blue and white striped shirt. In the background, another person is working in the field. The scene is lush and green.

We can UPTrack AIDA's
future.
